📄 <https://www.linkedin.com/in/mortadha-houch/>

## PROFILE

Backend Developer specializing in **RESTful APIs, microservices, and performance optimization** using **Spring Boot, NestJS, FastAPI, and Node.js**, with experience in **Dockerized systems, Redis caching, and MongoDB**.

## TECHNICAL SKILLS

**Backend Languages & Frameworks** Java (Spring Boot) · Node.js · NestJS · Python · Flask · FastAPI · Express.js · Fastify JS

**API & Architecture** : RESTful APIs · GraphQL · Microservices · Monolithic to Modular Design · API Security · Role-Based Access Control

**Databases & Caching** : MongoDB · MySQL · Redis (Caching, TTL, Pub/Sub basics) · Prisma ORM · Mongoose

**DevOps & Infrastructure** : Docker · Docker Compose · Nginx · CI/CD Basics · Linux Fundamentals

**Real-Time & Async Systems** : WebSockets · Event-driven design · Background jobs (conceptual)

**Engineering Practices** : API Testing · Git · Agile/Scrum · Clean Code Principles

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                    |

| <ul style="list-style-type: none"><li>• Built <b>high-performance APIs</b> using <b>Node.js, Fastify, and TypeScript</b>, implementing efficient routing and middleware.</li><li>• Designed <b>type-safe database architecture</b> with <b>Prisma ORM and PostgreSQL</b>, modeling complex business logic with normalized schemas.</li><li>• Implemented <b>secure authentication systems</b> using <b>JWT and middlewares</b>.</li><li>• Applied <b>robust validation and structured error handling</b> using <b>TypeScript types and Prisma client safety</b>.</li></ul>                                                                                                                                                                                                 |                                    |

- Optimized database performance through **query optimization, indexing,** and **connection pooling**.
- **Collaborated with frontend developers** to define **API contracts, request/response structures, and error-handling standards**, ensuring smooth frontend–backend integration.
